equipment, or forming part of that equipment, are grounded to prevent a voltage above ground on the enclosure materials.

[CGD 74–125A, 47 FR 15236, Apr. 8, 1982, as amended by CGD 94–108, 61 FR 28276, June 4, 1996]

EQUIPMENT GROUND

§ 111.05-3 Design, construction, and installation; general.

- (a) An electric apparatus must be designed, constructed, and installed to prevent any person from accidentally contacting energized parts.
- (b) Exposed, noncurrent-carrying metal parts of fixed equipment that may become energized because of any condition must be grounded.
- (c) Exposed, noncurrent-carrying metal parts of portable equipment must be grounded through a conductor in the supply cable to the grounding pole in the receptacle.
- (d) If the installation of the electrical equipment does not ensure a positive ground to the metal hull or equivalent conducting body, the apparatus must be grounded to the hull with a grounding conductor.

§ 111.05-7 Armored and metallic sheathed cable.

When installed, the metallic armor or sheath must meet the installation requirements of Section 25 of IEEE 45–2002 (incorporated by reference; see 46 CFR 110.10–1).

 $[{\tt USCG-2003-16630,\,73\;FR\;65196,\,Oct.\,31,\,2008}]$

§111.05-9 Masts.

Each nonmetallic mast and topmast must have a lightning-ground conductor in accordance with section 10 of IEC 60092-401 (incorporated by reference; see 46 CFR 110.10-1).

[USCG-2003-16630, 73 FR 65196, Oct. 31, 2008, as amended by USCG-2013-0671, 78 FR 60153, Sept. 30, 2013]

SYSTEM GROUNDING

$\S 111.05-11$ Hull return.

- (a) A vessel's hull must not carry current as a conductor except for the following systems:
- (1) Impressed current cathodic protection systems.

- (2) Limited and locally grounded systems, such as a battery system for engine starting that has a one-wire system and the ground lead connected to the engine.
- (3) Insulation level monitoring devices if the circulation current does not exceed 30 milliamperes under the most unfavorable conditions.
- (4) Welding systems with hull return except vessels subject to 46 CFR Subchapter D.

§ 111.05-13 Grounding connection.

Each grounded system must have only one point of connection to ground regardless of the number of power sources operating in parallel in the system.

§ 111.05-15 Neutral grounding.

- (a) Each propulsion, power, lighting, or distribution system having a neutral bus or conductor must have the neutral grounded.
- (b) The neutral of a dual-voltage system must be solidly grounded at the generator switchboard.

§ 111.05-17 Generation and distribution system grounding.

The neutral of each grounded generation and distribution system must:

- (a) Be grounded at the generator switchboard, except the neutral of an emergency power generation system must be grounded with:
- (1) No direct ground connection at the emergency switchboard;
- (2) The neutral bus permanently connected to the neutral bus on the main switchboard; and
- (3) No switch, circuit breaker, or fuse in the neutral conductor of the bus-tie feeder connecting the emergency switchboard to the main switchboard; and
- (b) Have the ground connection accessible for checking the insulation resistance of the generator to ground before the generator is connected to the bus.

§ 111.05-19 Tank vessels; grounded distribution systems.

(a) If the voltage of a distribution system is less than 1,000 volts, line to line, a tank vessel must not have a grounded distribution system.
